

Windows Management Client

BPC SurveyManager is a powerful web/HTML rules based forms engine that creates, distributes, manages, analyses and reports dynamically generated html and paper surveys and can even be used to build and manage general web sites. The system is available as part of the BPC RiskManager suite, individually or as a hosted internet service. The name does not do this application justice. With a large range of built-in forms, components and input control capabilities it is versatile enough to be used to create an entire website, smart enough to hold interactive rules driven natural language “conversations” with users, and simple enough that a survey can go from design to live in less than 15 minutes. It produces reports instantly by changing a couple of parameters, and supports complex hierarchical organisational structures such as a state with regions and schools or a corporate group, with divisions, departments and business units, or a university with faculties, schools, and departments, etc.

Originally designed to allow an organisation of 70,000+ employees to collect compliance checklist data in the last few minutes of a working day it was designed from the outset to be very fast and scale to tens of thousands of simultaneous users. The system will happily work on a laptop, or a large server farm. For example, the system has been used for many years by the Victorian Government to provide the annual Learner's Satisfaction Survey covering thousands of students in the state of Victoria.

Consisting of two engines – the maintenance engine and the survey engine, BPC SurveyManager is delivered with multiple front ends:

- Survey Creation & Management:
 - A simplified pure web/html survey management client for general use
 - A powerful full featured windows application survey management client for general use
- Survey Delivery & Response
 - A stateless ISAPI dll hosted on MS Windows IIS (any version) delivering dynamically constructed HTML pages providing surveys and reports.

Example Real world applications:

- Compliance surveys and control checklists (built in management of repeating surveys, archiving of responses, auto-locking options on completion)
- Marketing surveys
- HTML & rules driven application configuration interfaces
- User response & rules driven training systems
- Learning management system for student testing with prerequisite control (built in learning management capabilities allow for testing and marking and checking of prerequisites of students)
- Content management system for a web site with dynamically generated page content based on rules and user selections
- 360 degree HR surveys (dedicated capabilities for support of 360degree survey designs)
- Management and board performance report production
- Performance audits and customer satisfaction surveys
- Employee induction and exit interview recording
- Online job and tender applications

Web Management Client

Key Features

- Optional **integration with BPC RiskManager**.
- Optional integration with the Winnfield & Waisman* **Virtual World Learning System** in Second Life** for remote training virtual campus management.
- **Unlimited** organisations, survey managers, respondents, with configurable access rights, and unit and group reporting/analysis.
- Surveys work on **any HTML 4+ web browser as well as PDA's**
- **Distribute surveys across hundreds of organisations** with organisation level customisation but **central question list control** means survey look can be customised at the lowest reporting unit level.
- Surveys can contain **a huge range of input controls** for radio buttons, lists, drop lists, menus, buttons, links, login, password fields, text, file upload, surveys within surveys, clickable image maps, pop-up hints, custom defined, and many more.
- **Embed anything displayable** on a web browser in a survey question.
- Change input and response types and survey content/questions after publication (in fact any part of the survey, at any time!)
- Layout and configure the survey web pages and questions in **any layout displayable in a web browser**
- Automatically collect user advised **'importance' ratings for each question** in a survey if desired by checking one flag
- **Mandatory or non-mandatory questions**
- Display **different questions to different users** for the same organisation, survey, survey instance, etc.
- Optionally allow users to **revisit and revise survey responses multiple times**
- Run the **same survey each week to the same people** (uses survey instances)
- Each **response keyed by organisation, survey, survey instance, question, question fork (used in 360 degree surveys), and user**.
- Separation of concepts of **survey creation, distribution and publishing**
- **Define exception ranges for response** and track follow up actions.
- **Dynamically generates survey pages** based on organisation, survey question, survey page, user, user properties, previous responses to current and previous surveys or external application tests, plus more.
- Rules engine allows for **rules based page construction and includes built a in natural language parser** to process unstructured text responses, as well as tests for conventional conditional operators for equal to, greater than, less than, like, contains, etc.
- **Multicolumn surveys**.
- Build **surveys of surveys**. Eg. Put one survey in a left handle panel that is a menu of surveys a user can select, and display in the right hand panel each survey selected in the left hand panel.
- Build survey **questions with responses from other (or the same) surveys embedded in the question text** as lists, statistical analysis, full dynamically built sentences, and more.
- Build surveys with **automatic annotations based on responses** (allows web pages that automatically provide running advice or commentary based on user responses)
- Build surveys that allow for reviewer's comments on other user's responses.
- Build surveys in both structured "question – answer" layouts and **unstructured report layouts**, with paragraphs and responses embedded in the text. (Allows templated reports with mixed survey data, analysis and management report commentary).

PM&T Survey Manager: [PM&T Checklist](#) [Checklist](#) [Checklist](#)

FMCF Checklist August 2003					
Department of XYZ Agencies Compliance Survey					
 <p>This financial management questionnaire checklist does not address the requirements for certification under the Tax Compliance Framework. The certification requirements under the Tax Compliance Framework are covered by a separate checklist and certification process.</p> <p>In completing and signing the checklist, users need to refer to the detailed compliance requirements contained in the Directive and mandatory procedure sheets.</p>					
No.	Direction Requirement	Ref.	Response		
Section 2 - Financial management Governance and Oversight					
Financial Code of Practice					
<p>1. A Financial Code of Practice setting out controls required by the Director, and as necessary by effect of a management code, with regard to its operations and codes of ethics of its compliance requirements.</p>					
			Compliant	Partially Compliant	Non-Compliant
			Applicable		
Financial Governance					
<p>The Responsible Body is responsible for the presence and oversight of formal management and initiatives for debt with regard to its operations and codes of ethics of its compliance requirements, including the following:</p> <ol style="list-style-type: none"> 1. The responsible body has a clear understanding of the nature and purpose of its operations and the financial implications of its operations, including the financial implications of its compliance requirements. 2. Adequate financial resources are available to support the operations of the Responsible Body. 3. Adequate financial controls, including financial, operational and compliance and risk management controls, are in place to support the operations of the Responsible Body. 4. Adequate financial reporting is provided to the Responsible Body. 					
			Compliant	Partially Compliant	Non-Compliant
			Applicable		
<p>The Responsible Body, or the Audit Committee, will, within 12 months, make formal arrangements for the Responsible Body to audit the financial report presented in section 1, and for risk management, internal compliance and control systems to be audited by an external auditor.</p>					
			Compliant	Partially Compliant	Non-Compliant
			Applicable		
<p>The Audit Committee, or the Responsible Body, will, within 12 months, make arrangements to be informed of the outcome of the audit of the financial report and the audit of the risk management, internal compliance and control systems, and to receive a copy of the audit report.</p>					
			Compliant	Partially Compliant	Non-Compliant
			Applicable		
<p>Where a financial code does not exist, a financial code may be drafted from the checklist for Directive 2.2, and the Responsible Body will be required to submit the financial code to the Director for approval and to be provided to the Audit Committee.</p>					
			Compliant	Partially Compliant	Non-Compliant
			Not Applicable		

Performance Audit of Acumen Alliance's Audit Services

Survey of Departmental Secretaries / CEOs and CFOs

ACUMEN ALLIANCE

Gender	Question	Response

Key Features Continued

- Plug in libraries allow real-time ***two way interfacing to external systems***
- ***Built in archiving*** of survey responses
- ***Instant, real time report production*** with many options per question including, responses, response counts, responder names, percentage response breakdown, graphical response display, etc.
- Optionally allow ***unrestricted automatic (anonymous) or restricted (invited) survey access***.
- Upload recipients from csv (comma separated) files, export responses to XL
- ***Distinguishes between online and paper based survey responses***
- Optionally ***create surveys directly from marked up MS Word documents***
(Note – dynamic capabilities are not supported with MS Word documents)
- ***Mouse over sensing controls*** for hints and help fields
- Built in ***randomising news server***.
- Manages ***organisations, organisation structures, surveymanagers, respondents, guests, etc***
- ***Generates emailed invitations /reminders*** (any number with changing text).
- ***Timestamps*** survey commencement and completion
- Manages ***Distributed databases*** and data replication

The survey engine (compliance module) is powerful enough to run the annual state wide web based student satisfaction survey conducted by the Victorian Department of Education and covering more than 450 institutions and thousands of students each year.

With offices in **Melbourne (Australia)** and **Vancouver (Canada)**, Bishop Phillips Consulting is a specialist in governance systems and an incubator of management science technologies. **BPC SurveyManager** application has been built and maintained in Australia by **Bishop Phillips Consulting Pty Ltd since 1998**.

BPC SurveyManager Technology Requirements

BPC SurveyManager will run on MS Windows 98se, 2000, XP, 2003, Vista and 2008. It requires:

- WoW to run on 64bit versions of Windows.
- SQL Server 2000 / 2005 / 2008 or MSDE 2000 / SQL Express.
- MDAC 2.8

The minimum PC hardware is 500Mb RAM and 16 Mb disk space for the survey engine, 20mb disk space for the browser based management client and 20mb disk space for the windows management client. If the survey engine will generate graphical report components a reasonable graphics card on the server is required as images are dynamically generated rather than stored..

The survey engine is stateless and will support server farms.

Corporate and Systems Credits

Bishop Phillips Consulting was founded in 1995 as Stanton Consulting Partners and incorporated as Bishop Phillips Consulting Pty Ltd in 1997. Bishop Phillips Consulting is a software developer, incubator of management science technologies, business recovery advisor and general consulting firm specialising in governance and performance improvement processes and systems with offices in Australia & Canada.

BPC Clients Include:

Monash University – Deakin University - Australia Post – Telstra (Australia) - The University of Melbourne - Swinburne University - BHP - AAPS for UBC – City of Port Phillip - Benfield Group - ACFE (Department of Planning and Community Development - Victoria) – Government of British Columbia (Canada)- Inter-University Services (Canada) – British Columbia Institute of Technology – University of Calgary – Saskatchewan University – Queens University – Pacific Pilots Association – Department of Education (Victoria) – Simon Fraser University – Nova Scotia University - University of Ottawa - Career Ed (USA) – And many others.

* Winnfield & Waisman is a division of Bishop Phillips Consulting that builds virtual world immersive environments and systems primarily in Second Life**. Its flag ship products are virtual world learning systems, campuses and meeting spaces and the various technologies and infrastructure required to run training courses and meetings in immersive environments.

** Second Life is the Trade Mark of Linden Research, California, USA. It is an open access immersive virtual world. [Http://secondlifegrid.net/](http://secondlifegrid.net/)
